What is alyvium®

Alyvium® is a dietary supplement that contains Vitamin A, biotin, riboflavin and a studied and optimal combination of natural olive polyphenols.

Vitamin A is involved in the development, protection and regulation of skin and mucous. According to the scientific panel of the European Food Safety Authority (EFSA), Vitamin A plays an important role in the normal function of the immune system. It is an essential nutrient for humans. It is used for problems such as acne, eczema, psoriasis, burns, etc.

Riboflavin and biotin, according to EFSA, contribute to the maintenance of normal skin.

Riboflavin is a type of Vitamin B that meet vital functions. It is also a key vitamin involved in the metabolism of carbohydrates, fats and amino acids. It is known that their poor intake can cause stress. Lack of biotin may show symptoms such as dermatitis or eczema, skin drying.

The uniqueness of Alyvium® lies in the presence of a specific combination of biophenols, and flavonoids with a high antioxidant activity.

The ingredients of the formulation and the capsule itself, are exclusively of vegetable origin, then suitable for vegetarian diets.

Alyvium® has been awarded The Best Food Supplement of the Year in Europe in 2017, awarded by the specialized media "Nutraingredients" (William Reed Media) and chosen by a Scientific Expert Committee and by the readers.

Alyvium® is a natural solution which is clinically proven to help mitigate the symptoms of psoriasis and atopic dermatitis.
What for: psoriasis, atopic dermatitis and inflammation

Alyvium® is a natural alternative for improving symptoms that are reflected in the skin as a consequence of immune system disorders, dermatitis, eczema and psoriasis.

The main manifestations are irritation and obstruction of the skin, causing symptoms such as redness, scaling, swelling, burning and itch.

These conditions lead to inflammatory processes with clinical symptoms in skin, fitting like an "immune" disease.

Inflammation is an essential defense mechanism that occurs after exposure to a harmful stimulus. The acute inflammation occurs rapidly in response to tissue damage or infection and related thereto some key agents, such as antibodies and leukocytes, to a range of effects aiming tissue repair.

Acute inflammation can develop into chronic inflammation. An inappropriate chronic inflammation is considered a pivotal driver of high incidences of countless diseases, including cardiovascular failure, arthritis and psoriasis.

Combining natural compounds with certain properties and vitamins it is possible to protect the skin keeping it in a more stable state, alleviating symptoms.

Olive polyphenols

Alyvium® contains a studied and optimal combination of natural polyphenols and flavonoids found in olives, in the right proportion to obtain increased activity and efficacy.

Polyphenols have aroused great interest from the nutritional point of view, by their actions not only in the health, but preventing functional and structural alterations of various diseases.

Olive polyphenols are known as potent antioxidants, which are capable of reducing and depressing inflammation, improving symptoms in skin disorders such as dermatitis, eczema and psoriasis, without adverse effects. They act by direct inhibition of the biological activities of inflammatory mediators such as cytokines.

Biophenols are present in the composition of Alyvium® and are part of our diet through consumption olives and olive oil.

How to consume alyvium®

The recommended dose is 2 capsules per day, at any time of day with a meal. Given the variability of the symptoms and the intensity of the disorder, each person must modulate the dosage, depending on the state and response.

There is no definitive treatment to cure skin problems including psoriasis and dermatitis. All treatments do not have the same results in all people. The way a person reacts may change over time.

To verify the effectiveness of Alyvium® it is necessary to continue its use for at least 45-60 days, although it is very possible to notice positive effects before.

As any other food or active ingredient that is ingested directly and repeatedly, it is recommended that some reasonable period of rest be followed after several months after consumption of the course.

Alyvium® is not a product to cure or prevent a sickness. It is a dietary supplement that helps mitigate the symptoms of skin disorders and keep it in normal conditions.

Our product recommendations and dosages are designed for adults (over 18 years). We do not recommend the product for children. A specialist should be consulted.
